New Shell Mound Uncovered Near Georgetown

by Skip Opalko
Coastal Carolina's Anthropology department has been working on a new site at DeBordieu Colony just north of Georgetown. The new site, a shell mound similar to those found on Wadetts Island in North Myrtle Beach, was uncovered by a bulldozer as it was clearing the way for a new golf course.

The site was reviewed by the governor-elect (Jim Edwards) and his family on the week-end of November 11th and 12th. Dr. Engelmeier explained to the Edwards the reason why the site was so important and answered their many questions about the excavation.

The site has produced a few,

bones, two pig teeth, two conch shells and a lot of broken pottery. Dr. Engelmeier said that Columbian Tribes in the South America used the conch shells when they buried their dead. This is important because it has not been determined just what these sites are or their use.

Also, two projectal points were found around the mound. One was dated between 500-900 A.D. and the other could be found around 1500 B.C.

This site must be excavated soon because it is located on a golf course green. The Anthropology department needs help in doing this. If you are interested get in touch with Dr. Engelmeier, Skip Opalko, Janet Troiano, or Gene Causey.

THE EFFECT OF GAMMA RAYS

The Theatre Department's next major production is The Effect of Gamma Rays on Man-In-The Moon Martigolds, directed by Jim Cox, who recently choreographed The Pajama Game.

This Pulitzer Prize winning play is a dramatic piece in two acts, with a cast of five women. Mr. Zinder's play has already been released as a gripping motion picture starring Joanne Woodward and directed by her husband, Paul Newman.

Beatrice, the cynical mother whose life has been disappointing is being played by Marcie Featherstan. Marcie is a freshman Theatre major who is making her debut in this production.

Beatrice's two daughters, Ruth and Tillie, are being played by Sharon Numbrinson and Becky Brunson. Ruth is the older of the two, an epileptic and popular in school. Tillie, the younger daughter, is a plain and sensitive person, often made fun of. Sharon was previously seen in The Pajama Game and Becky teaches English and Drama at North Myrtle Beach High School.

The fourth member of the house is Nanny, whom Beatrice is attending for fifty dollars a week. The part is being played by Mignon White, remembered as Poopie in The Pajama Game.

Janice, played by Diane Tuvstal, is Tillie's main competition in the school science fair. Diane was also seen in The Pajama Game.

Performances are being held Nov. 21, 22, and 23rd at 8:15 p.m. Tickets will be available through cast members. Tickets may also be bought at the door. Reservations may be made by calling Coastal Ext. 150.

HELP!!!!

AN ENTIRE FILE CABINET OF MINE, FILLED WITH MATERIAL (mostly in Spanish) IS MISSING. IT CONTAINS INVALUABLE MATERIALS, (10 years of research). ALSO MISSING ARE SETS OF TAPES BELONGING TO THE SPANISH DEPARTMENT.

COULD YOU PLEASE LOOK THROUGH YOUR BOXES AND CABINETS, PERHAPS IN THE SHUFFLE OF MOVING THEY WERE MISPLACED.

Thank You

The Elections of 1974 are over, and the public has "spoken its mind". The silent majority have given the Democratic Party its vote of confidence in trying to solve some of the problems that haunt America. Yet, these problems that trouble US will not be solved neither immediately nor without much sacrificing by the commonplace.

Inflation has occupied the headlines for the last year-sometimes co-starting with Watergate-but now taking over as the star. Much has been written on this albatross by leading economists and political leaders. These 'experts' have blown a lot of hot air, but have provided few solutions. This is not to say that I am criticizing them; rather I am pointing out (or should I say: LET ME MAKE IT PERFECTLY CLEAR?) that this cancerous growth has overtaken the whole body - The United States, and likewise, the other nations of the world. For a successful operation, the political leaders of the world, especially the U. S., need to cooperate and communicate. Let's hope that they can indeed get together and work for the common good.

South Carolina’s Largest Christmas Festival to Be Held November 21-24

The Doctor’s Bag

by Arnold Warner, MD

Address letters to Dr. Arnold Warner, Box 974, East Landing, Mt. 48231.

QUESTION: About one week after my period ends my breasts get very sore and sensitive. This lasts until my next period. What could this be and what can be done about it?

Could it be because my boyfriend fondles me too roughly? Is my breast tissue too sensitive an organ? Are my bras too tight?

ANSWER: Women often experience some breast tenderness before the onset of their menstrual period (a “real” menstrual period, not what occurs with the pill). Such tenderness is due to hormonal changes that are part of the menstrual cycle. Birth control pills themselves can produce breast tenderness and so can too tight a bra. However, a tight bra produces breast lumps as well as tenderness.

Breasts are easily traumatized as they are made up mainly of fatty tissue. Black and blue marks and other evidence of damage should be apparent if injury has occurred. This leads us back to your boyfriend. It could be that he is fondling you too roughly or just fondling you too much. Breasts respond to stimulation with the swelling of the mammary tissue as well as the nipples and the tenderness could be secondary to the swelling. In addition to alleviating the pain, you might forestall the onset of boredom if you get him to decrease his efforts somewhat.

I WANT TO DIE BROKE

(CP5) - Douglas McMinn, a multimillionaire, has harbored a lifetime ambition: to die broke. He has gone broke away more than $3 million to his employees and charity.

McMinn, “born without a penny,” opened up a small shoe shop after the war in 1946 and moved progressively to bigger and bigger headquarters, until he sold out recently for $5 million. Ten years ago, he had given three quarters of the shares in the company to 47 old employees.

One employee, Dick Bedding, reminisced: “I first met the guy when we were both auxiliary firemen during the war. Afterwards when he opened his first little shop I went along and got a job as an assistant and I have been with him ever since. Now my wife and I will probably buy ourselves a little bungalow. Just after he sold his firm, McMinn said: “I have got all the money I will ever need. I was born without a penny and that’s how I intend to die.”

THE ALCOHOLIC ENGINE

(CP5) - Henry Ford move over. Penn State alumnus claims he has invented an engine which runs on water mixed with alcohol and he has been invited publicly to test his invention on the Le Mans race circuit.

His invention took him 18 years to produce. At present he drives a modified Dodge engine using only 40700 water and 40% alcohol. He says that in early May this year his engine ran from Philadelphia to the city of Pittsburgh and back, a distance of some 660 miles.

Chamrin says that he starts the engine with pure alcohol, then cuts off the supply and turns on a flow of water-alcohol mixture. Somehow the engine keeps running, presumably by isolating the hydrogen in the water.

This is accomplished by something called cracking which usually requires very high temperatures. Wizard Chamrin says he has found a way to do this using relatively low temperatures generated by an ordinary engine.

He declines to reveal more, but French experts have eliminate the possibility of hoax or known. They have seen the engine at a demonstration and they agree that it is the water that is cracked, not Jean Chamrin.

THE EXHIBIT AT THE FESTIVAL

The Festival will include thousands of items all made by hand and appropriate for Christmas gifts. They represent the work of hundreds of students and local groups who have prepared for the Festival for one full year. They will offer toys, leather, paper mache, candles, decoupage, glass blowing, sil­ver smiths, jewelry, quilting and many other crafts and all will be offered for sale.

Also planned are special attractions such as a doll house filled with miniature furniture handmade stuffed toys as tall as the feet high, gifts for your favorite pets, Christmas bakery products, and by popular request the Miniature Plants produc­tion created by Mr. George Elders of Hickory, N. C.

Other Civic groups will contribute their bit by furnishing hourly entertainment. Also professional entertainers will be on hand for the festivities. Miss Bobbie Lynn will be the guest of the show and will entertain several times throughout the week. Miss Lynn is known nationally for her singing and dancing talent and is giving her time because of her interest in family entertainment and in civic projects.

The Warrenton Plum Pudding Festival has been an acceptance and, for one full year. They will offer Christmas items all made by hand and appropriate for Christmas gifts.

Howard White, a high school
All American and junior college
transfer from Palmer, certainly
has the potential to help get
Coastal on the way to having a
powerful basketball team in the
small college ranks.
While playing high school ball
at Halifax County High School
in South Boston, Virginia,
White amassed many awards
and honors. He was recruited by
such schools as Davidson, Duke,
Georgia Tech, Alabama, N. C.
State, and others. While prefer-
red a smaller school and chose
to play at Palmer Junior College in
Columbia.

As a senior in high school,
White made the Virginia All-
State 1st team, was an
Honorable Mention All-Ameri-
can and the second leading
scorer in the state of Virginia,
and was the MVP in the Virginia
High School League East West
All-Star game.

In his two years at Palmer,
White’s record was no less
impressive. He amassed 855
points and holds the school
backcourt field goal record of
63.7%. White comes to Coastal
with a very high recommenda-
tion from Palmer.
At the end of his career at
Palmer White declined the
opportunity to play at Virginia
Tech and chose Coastal instead.
"I didn’t want to go to a big
school," explained White, "and
I thought that I might be able to
help Coastal’s program.
While on court, it is typical to
be shot for defense or
praising a team mate for
fine play. Even in practice, his
strong enthusiasm is very
apparent.
"I think we will have a good
year," stated White, "but I
don’t like to make any predic-
tions. I’m the type person that
feels that if you put forth a

good effort, a good result will
evolve.

The two great traveling adventurers, Lord
Crumbwell and Sir Gasque, have arrived in the
vicinity of Coastal Carolina after having
completed their trans-oceanic journey, saas boat.
They are tired and very thirsty.

"Ah, Sir Gasque, the trull is dusty. Perhaps we
should stop in at this tavern for a bit of the
bubbly." "Champagne? From we all ref?"

Sir Gasque pulls out his pockets

And as so often in the past, the traveling
adventurers have encountered and retreated
from another menace in their noble Quest for the
Holy Grille.

The travelers enter the establishment
and look around. "How much did you say we
were worth?" Crusmbell asked. "About 43 cents." "Pray thee, do you see anything on
the menu we can afford?"

"And what else can we get, you dumb knave!"
Crumb well said rather loudly. "Nothing, me
lord. We haven't enough money," they’ll take our wooden nickel," Crusmbell
ordered. "I don't think they will, sir. Besides, I
think it would be best if we simply
took our refreshments and left." "Yes, perhaps we
should," Crusmbell said.

The two travelers were purchasing their milk
when Crusmbell turned to Sir Gasque. "Tell me, Sir
Gasque. Why is there so much noise in here?"
"Not noise, sir, gas," Gasque replied. "Gass?"

The fishing along the coast has been far from the
peak condition that usually prevails
for this time of the year. The
influx of a warm southerly
wind has lifted the water
temperature and driven the fish
of shore. But with this cool
snap the fishing should pick up
it's seasonal peak.

YALE STAGES TOKEN FAST

(CPS) - The day international
delegates began talks at the
World Food Conference in
Rome, some students at Yale
did something else about the
food crisis. By going hungry
themselves, they raised over
$5000 to feed families in New
Haven and overseas.

Under the leadership of Yale
chapelain Rev. William Sloan
Coffin, 2200 students, about
fourth of the student body,
fasted for a day, each receiving
a $1.70 rebate from school
dining halls. The money,
combined with $800 in contri-
butions will be divided among
the New Haven Free Food

Council and two groups that
distribute food to Bangladesh
and Western Africa.

In conjunction with the fast,
student task forces were formed
to do their own evaluation of the
world food crises. One group
will keep tabs on the Rome
conference, specifically on the
resolutions of the US delega-
tions; Another committee will
explore ways in which the
university as an institution
in aid in solving the problem.
A third group plans to come up
with suggestions for individuals
and the New Haven community
to help feed the hungry.
