The Recreational Fishery in South Carolina: The Little River Story
By Dr. Victor G. Burrell
(Published in 2000: Additions to original text in brackets)

Introduction

Little River was [possibly] the first permanent settlement in Horry County and dates back to the [early 1700s]. It is situated on the North Carolina–South Carolina border and has always had a strong maritime tradition, first as a source of seafood for Indian tribes of the region and then for subsequent settlers. Next it was an important terminus for sailing ships bringing in supplies for the surrounding area, chiefly from Wilmington, N.C. in the 1800s and early 1900s. Lumber, naval stores and cotton were the major exports during this era. Oysters were also being shipped around the turn of the century. A fish factory also operated out of Little River in the early 1900s, processing the catch of the purse seiner Prince (Floyd 1996, Gragg 1994, Lewis 1988 a,b,c,d, U.S. Dept Commerce 1920).

People from surrounding communities came to Little River to fish and enjoy other water activities such as swimming and sightseeing. Some camped on the bluff along the waterfront. This became a very popular site and in 1925 Lucian Bryan built a hotel.¹ This has turned out to be the only [recorded] waterfront hotel ever located at Little River and has always been referred to as “The Hotel.”

As Little River became a vacation spot, other industry was dying out. In 1918 the boiler at the Hammer Lumber Co. mill, which was the largest in the area, blew up killing five people (Berry 1977). It eventually closed putting many out of work. In the early 1920s the oyster factory closed probably due to poor markets and short supply of cheap oysters and labor. The cotton gin closed about this time as did the fish factory (Horry Herald 1922). The naval store industry suffered as demand for their products fell off also, limiting job opportunities further. About this time some of

fishing, first in row boats and then in power boats, probably due to some extent to the drop off in industry, but also as a result of increased presence of vacationers. This was the first organized offshore recreational fishing in South Carolina where a group of boats carried people fishing for a fee (Gragg 1994) (Lewis 1988).1

When the men and boys at Little River began to take people fishing cannot be dated exactly, but probably it began in the early 1920s. River parties were the first to be carried out. Some were taken in boats rowed by the guide. The former crew boat for the Hammer Lumber Company was used by Lawrence [C. Sr.] [1904-1998] and [R.] Jerome Long [1903-1974] to carry river parties in the ‘20s.2

Deep sea parties were first organized by [Robert] “Bob” [1896-1974] and Leslie A. High [1922-2007], Liston [L.] Thomas [1902-1990] and probably [Robert W.] “Rob” Mintz [1895-1957]. Victor [Sloan] Cox [1895-1960] joined the group shortly thereafter. Bob High’s first boat was the Eugenia and he began carrying people to the Blackfish Banks in 1923.5 An article in the Horry Herald gives an account of a party’s catch, fishing out of Little River in 1925 (Horry Herald 1925). Several of the early crafts were open boats that had no shelter for the fishermen. They were powered by one or two cylinder gas engines of very low horsepower.2,3,4 Many boats came into the fishery in the late ‘20s and through the ‘30s, but they were owned and operated by a small group of captains.4

Important Events in Development of Little River Recreational Fishery

Many people were first attracted to the South Carolina coast prior to World War I by haul seine fisheries located near Futch’s Beach, which is now East Cherry Grove Beach (C.B. Berry, 1996a). The earliest operators were Mr. Lucian Bryan and a Mr. Nixon.1

The development of Myrtle Beach in the teens and early twenties by [Edward and Henry Burroughs,] Simeon [B.] Chapin Burroughs and John T. Woodside probably led to people seeking another pastime as they became aware of the coast. Certainly early realtors noted the availability of recreational fishing nearby as they spoke to prospective buyers (Lewis 1988a). And as mentioned earlier, by 1923, enough people were visiting Little River that a few local boatmen began to offer fishing trips to the near shore Blackfish Banks.

As more people came to the area and demand increased, better boats were sought to appeal to potential customers so the open boats soon were replaced with those having canopies and cabins for protection from sun and weather. The marine head (toilet) also more than likely was a further creature comfort introduced into the fishery in the late ‘20s.3

The Intracoastal Waterway was begun in the late ‘20s and completed in 1936 (Lewis 1988c). Construction of this project led to more people coming into the area to work. These laborers from other places needed housing and board. Places catering to them also were available to fishermen and vacationers. One boarding house was operated by Mrs. Sam [Samuel Gourdin] Vereen (Catherine Ellen “Miss Kate”) [1889-1967]. Mr. Sam Vereen [1889-1967] also provided rental row boats for fishermen. Hugh [T.] McGinn [1911-2004] rented his skiffs to fishermen and to the Corps of Engineers to use to survey for the waterway when they began their work in the area. He later worked for the Corps as a survey party member.1 The waterway when completed in 1936 also changed the tidal flow through the Little River Inlet, seemingly to make its changes in location more erratic (Megivern 1996). When an inlet is in the process
World War II closed the recreational fishery as no boats were allowed to take parties offshore, only shrimpers were permitted to work inshore off Little River. The end of World War II allowed party fishing to resume. However, offshore recreational fishing did not boom at first. The boats had to be replaced. Captain Rob Mintz rebuilt the Cadet as the Sea Rambler and used her for shrimping and Victor S. Cox brought in a sailboat, the Ray Stubbs, to carry parties. Lawrence Long sold the Josephine shortly after the war. As life returned to normal and people had more time for vacations, the fishing picked up and more boats began to be added to the fleet. Mr. Luther [H.] Wilson [1874-1961] brought in the Helen Jean and the Johnnie Jr.

Mary [E.] Juel, who had bought the hotel and its docks, acquired the Martha Ann. About 1947 Frank Juel bought the first of several 63 foot war surplus air sea rescue boats. [T.] Vivian Bessent Sr. [1911-1977] in partnership with [Samuel] Mettler Vereen [1913-1982] also acquired another. These boats were good sea boats, moderately fast, powered with 671 GM diesels, had shallow drafts, and a lot of deck space for fishermen. Sam [P.] Gardner [1893-1968] of Myrtle Beach bought an 84 foot air rescue boat named the Carolina Queen. She carried blackfish fishing parties and also was used for moonlight cruises. Mettler Vereen bought the Ocean Queen, a 104 foot war surplus craft, in 1952. Both of these boats had to schedule departures to take into account tidal height on the inlet bar as they drew two or three feet more than other boats at the time. Surplus military radios and other gear helped modernize the fleet.

On 18 May 1941, the Nightingale, a 48 foot twin engine yacht converted to a headboat, blew up killing seven of 39 passengers. The Nightingale owned and piloted by Douglas Sebastian had recently been repowered with Buick automobile engines and fuel problems led to the explosion. The Edward captained by Victor S. Cox and the Cadet captained by Rob Mintz rescued most of the passengers and all of the crew. (Charleston News and Courier 1941 Charleston Evening Post 1941). A group of soldiers on the Cadet went into the water and were responsible for saving many of the people. The crew, none of whom was hurt, was Captain Sebastian, Donnie [O.] Mintz [1915-1985], engineer, [W.] Leroy Mintz [1928-1954] (12 years old at the time), mate. Word of this tragedy led to a great drop-off in the number of headboat fishermen this last summer before World War II. Accidents such as these finally led to much more stringent licensing and safety regulations required for party boats and captains in the mid 1950s (U.S. Dept. Commerce 1956).

On 15 October 1954, Hurricane Hazel, packing 115 mph winds, hit Little River head on. A tidal surge exceeding 15 feet wrecked docks, boats and shore facilities. No lives were lost, but everyone had to scramble to get ready for the next season (Taylor 1954). Only two boats were serviceable after the storm (Myrtle Beach News 1954a). This led to further upgrading of the boats. Crowds looking to go fishing were back in force in 1955.

About this time, the U.S. Congress passed the Merchant Marine Act of 1956. The “Ray Bill,” as it was called, placed more safety requirements on operators and vessels carrying people for hire. The rules applying to vessels carrying over six people were so strict it made it almost impossible for a gasoline powered boat to meet them (U.S. Dept. Commerce 1956). This led most of the smaller boats at Little River to become charter boats carrying six or less people. Trolling for pelagic game fish

Another big event in the fishery was the advent of the Josephine in the early ’30s, captained by Lawrence Long. She was longer, finer, and prettier than any boat yet to carry parties. She carried 49 people for $1.00 per head. This greatly increased the fame of Little River as customers extolled the virtues of her after returning home. In the late ’30s, the Josephine was hired to go up the Pee Dee River to Mars Bluff, S.C. near Florence to pick up campers for a session at the YMCA Camp Nixon located at Cherry Grove Beach. This further enhanced her reputation.

On 18 May 1941, the Nightingale, a 48 foot twin engine yacht converted to a headboat, blew up killing seven of 39 passengers. The Nightingale owned and piloted by Douglas Sebastian had recently been repowered with Buick automobile engines and fuel problems led to the explosion. The Edward captained by Victor S. Cox and the Cadet captained by Rob Mintz rescued most of the passengers and all of the crew. (Charleston News and Courier 1941 Charleston Evening Post 1941). A group of soldiers on the Cadet went into the water and were responsible for saving many of the people. The crew, none of whom was hurt, was Captain Sebastian, Donnie [O.] Mintz [1915-1985], engineer, [W.] Leroy Mintz [1928-1954] (12 years old at the time), mate. Word of this tragedy led to a great drop-off in the number of headboat fishermen this last summer before World War II. Accidents such as these finally led to much more stringent licensing and safety regulations required for party boats and captains in the mid 1950s (U.S. Dept. Commerce 1956).
In the early-to-mid fifties, Frank [N.] Juel [1926-2006] initiated “Gulf Stream” fishing on the snapper-grouper banks. Several boats became involved. Some would fish the Blackfish Banks on a day trip and then after cleaning up and a short nap by the crew, head back off shore for a 20 to 24 hour excursion. Frank Juel bought an aluminum hull crew boat from oil interests in the Gulf of Mexico in the mid-sixties. This was named the Hurricane. She was powered with two V-12 GM diesels and cruised at about 22 knots. This permitted one-day trips to the offshore fishing grounds.

A very significant thing happened in the recreational fishery in the late sixties. Frank Juel initiated half-day fishing trips on the Tradewinds to the inshore Blackfish Banks. This was a 55 foot boat that carried about 45 people at $6.00 per person. Captained by Joe Elliott, she was fast at about 20 knots and could leave the docks and be fishing in an hour. This actually was the beginning of the end of the dominance of “meat” fishermen in the blackfish party business and probably was a beginning of change in attitude of most all sport fishermen who thought that you had to catch enough to partly offset your expenses. Half-day parties were accepted for several reasons including those mentioned above. Families vacationing at the beach could enjoy an ocean outing for the whole family for a reasonable sum, and the catch was not too important because lodging facilities often did not provide cooking or means for keeping fresh caught fish. Boats were fast enough to get to and from the inshore reefs in a half day and allow enough fishing time to satisfy most fishermen. Once the jetties were in place in 1983, boats could cross the bar at any time of day. A family could have an outing without taking up an entire day and coming back worn out from a full day at sea. Gradually the half-day trips came to dominate the blackfish party business.

Trolling or “charter” boats were generally concentrating on Spanish mackerel, blue fish, king mackerel, dolphin, some cobia, bonita, and a few little tuna up to the early sixties. Boats and captains who wintered in...
Florida, taking a cue from the sport fishery there, began around 1960 to rig out for sailfish and other large pelagics and the fishery then included big game fishing boats along with the “inshore” trolling boats. The period 1955 to 1975 marked the heyday of the Little River recreational fishery.4,7,8 More people sought out the recreational fishing opportunities at Little River to satisfy their hankering for a good catch of fish than anywhere else in S.C. Boats and facilities operated at full capacity from Memorial Day to Labor Day.

Trailerable outboard powered boats were becoming quite common in the sixties. Boats constructed of fiberglass reinforced resin made it possible to use heavier, more powerful outboard engines and move them on trailers up and down the highway without shaking the boat transom loose. Many of these boats began to use Little River Inlet to get into the ocean. Others fished in the river. The outboard component was a consideration of the fishery when concerns about condition of the fish stocks arose.

Private sport fishing boats were docked at Vereen’s Marina about four miles above Little River waterfront, as well as a couple at Little River. These boats on occasion took parties to help pay upkeep and provide more income for captains who maintained and ran the boat for the owners.4,6 These were modern, well fitted out vessels and this put pressure on the regular charter boat owners to upgrade their boats and services to compete. So the older, less appealing, low cost boats were slowly replaced by the more costly, higher tech, speedier fiberglass manufactured vessels.

Arthur Smith of country singing fame initiated a King Mackerel Tournament in 1977 held at Little River. This annual event became highly successful by bringing in a large number of boats and anglers. Families and friends accompanying participants added to the positive economic impact in the area. This tournament was expanded to Murrells Inlet in 1983 and Charleston in 1992. While just at Little River, about 90 percent of the fishermen came from South and North Carolina. By 1982, as many as 888 boats participated. All the Little River charter boats took part in the competition but only made up four percent of the fishermen involved. The majority of the participants used their own boats or were guests on other boats. The tournament was discontinued in 1993 (Smith and Moore, 1980, Moore 1984). Most of the party boat operators at Little River welcomed the tournament in the beginning but became disenchanted as it began to attract a more professional clientele. Local captains felt highly financed groups had an unfair advantage over the strictly amateurs who were the initial competitors in the tournament.11,12,13

Concern about the dangers of the Little River “bar” probably dated back to the time the first sailing vessels crossed it, as it was shallow, changeable and subject to a real wicked following sea (C. Berry, 1996b). An early victim was the steamer Sanders. It went aground and was lost in 1907 (Lewis, 1988c, Megivern 1996). Ralph Ellis, a one time postmaster, legislator, real estate entrepreneur and always champion of Little River and its fishing community, started trying to get the Federal Government to construct jetties at the inlet before World War II. He recalled correspondence with Senator Olin B. Johnson in 1942 in which the Senator said there was hardly any way that the federal government would come up with the estimated one million dollars to fund the project. Ralph persisted and finally during his time as a state senator, he and others convinced those in Washington that the jetties should be constructed. They were completed in 1983 at a cost of 25 million dollars, some forty years after Ralph’s dealings with Senator Johnson...9 This allowed deeper draft boats to use the inlet pretty much at any tidal stage and also kept the channel in one place (C.B. Berry, 1996b, Megivern 1996).

Artificial reefs that added to the fish habitat were constructed in the waters off Little River Inlet. The first of these was begun in 1975 as a joint venture between the S.C. Wildlife & Marine Resources Department (now the Department of Natural Resources) and the North Carolina Division of Marine Fisheries. Little River Reef was started with used automobile and truck tires, with
other types of material added later. It is very close inshore in 20-30 feet of water. Two other reefs have been located in the area, one about 11 miles from the mouth of the inlet and the other further off at about 33 miles out and to the south (Bell 1996, Myatt 1978). These small reef areas are not used to a great extent by headboats and charter boats, but they have served to attract people to the Little River area and provided enhanced fishing for smaller boats fishing out of Little River Inlet (Liao and Cupka 1979, Cupka 1974).

The United States Congress passed the Fisheries Conservation and Management Act of 1976 to address the problem of declining fishery resources. This law established an exclusive economic zone (EEZ) which gave the federal government control of all organic resources lying in waters beyond the state three-mile limit to 200 miles offshore. This has resulted in development of a series of management plans which, among other things, place catch limits on the recreational fisheries (Jacobson 1978). Catches of mackerel, billfish, and the snapper-grouper complex which includes black sea bass have various restrictions such as minimum size limits, allowable catch per person per day and annual total allowable catch by recreational fisheries. These regulations are continually being updated. In 1987 charter boats were required by an amendment to the coastal migratory pelagic resources plan to have permits to fish in the EEZ. A red drum management plan prohibits possession of this species in or from the EEZ (Smith Atl. Fish Mgt. Council, 1997). Concern for the resources that brought about this act, were felt by many sport fishermen. They, realizing the pressure on game fish species, have made tag and release a rule on many of their fishing trips (Davy, 1994). Some tournaments are using photographic evidence to record released catches (Anon, 1994).

The state of South Carolina, with the passage of the Marine Recreational Fisheries Conservation and Management Act of 1991, required all boats carrying fishing parties for hire to purchase charter vessel permits. This legislation also required persons fishing in saltwater from private boats to purchase an annual marine recreational fishing stamp (S.C. Dept. of Natural Resources 1996). Salt waters in the Little River area are defined as the waterways seaward of the Intracoastal Waterway Bridge at Nixon’s Crossroads. The state has also passed laws which place size and catch limits on fish caught or landed within salt waters under state jurisdiction and which provide that certain federal laws pertaining to fish caught in federal waters adjacent to the S.C. coast are also the law within areas under state jurisdiction.

The People and Their Boats

Captain Bob High had a succession of boats--starting with the above mentioned Eugenia. He purchased a double ender aptly named the Doubleender. She was powered by a Minimus 8 HP make or break engine. This type of engine had no reverse gear and was stopped or backed down by cutting off the ignition until the fly wheel had rocked back after making its
last forward revolution and then connecting the ignition back so it started running in reverse. This operation took quite a deft touch and sometimes caused a pretty abrupt stop when the reverse didn't catch and the boat rammed the dock.4

In the 1920s, Bob also owned the Hammer, the former crew boat for the lumber mill. In 1935 he bought the Mud Turtle, a 27 foot motor sailer which was fished in the river by [Olan James] Williamson [1908-1978]. It was called the Mud Turtle because at low tide its slip ebbed out and she lay in the mud. It was powered by a one cylinder Palmer engine. Bob and Junior McCorsley bought the Acey Horton around this time and used her as a party boat. Bob replaced the Acey Horton with the David K. This boat had a shrimper hull and was powered by a 30 HP, three-cylinder Bridgeport engine. Next came the Clyde Jr. which was a Harker Island built boat (U.S. Treasury Dept 1945). She was first powered with a straight eight Buick automobile engine and then with a six-cylinder Chrysler Crown.5 Just before the war, he ran the Eva Mae for Hugh McGinn. After WWII he bought the Molly, a twin screw boat. He kept her a short time and sold her to Vivian Bessent.1,5

His last boat was the Bennie Lane. At first he and Donnie Mintz owned her together and they shrimped in the fall and carried parties in the summer. Bob bought out Donnie and eventually she was used entirely as a party boat. She was 45 feet long and powered with a Chrysler Crown. Bob retired in 1966.5

Bob High was a very crusty character and seldom backed off from any situation. One time one of his parties, which had been drinking rather heavily, refused to pay him for the trip. Captain Bob merely tied up to the inland waterway marker across from the dock and called to someone on the shore to get the sheriff, while he kept the party at bay with a sock loaded with fish sinkers. The party paid up and he brought them to shore.3,4

During Hurricane Hazel, Bob took the Bennie Lane out into the river right into the teeth of the storm. He saved his boat, but he said he promised the Lord that he would never do that again. Asked if he was scared, he said, “I wore one life preserver and was standing on another.”

Victor S. Cox was another who had a succession of boats. Some he owned and some he managed or fished for others. Victor had an early acquaintance with boats at Little River. One of his early jobs was operating a steam launch to bring sailing vessels across the bar and dock them at the oyster factory. This was before he entered service in WWII.3 The particulars of his boats are not well known, but he owned or operated the Pearl, the Water Lily, the Loaf Along and for many years the Edward which he bought in 1925. Captain Victor called the Edward an open built boat. That meant she leaked considerably. Jennings Vereen [1887-1969], one of the mates, said he had pumped the Atlantic Ocean through her seven times. It was said that the mate, Red Fulwood, sometimes slept on the boat with his foot in the bilge and when the water reached his foot he would wake up and pump her out. Bob High’s son, Edward, walked by Captain Victor painting the Edward one day. Captain Victor sang out a ditty – “A little powder and a little paint will make people think what she is – is what she ain’t.”5 The Edward was about 48 feet long and gas powered with a 35 HP Lathrop gasoline engine (U.S. Treasury Dept 1945). He initiated moonlight cruises with the Edward and operated her until he went back into the service in WWII.5

After the war, Captain Victor ran a 50-foot sailboat, the Ray Stubbs, for about two years. This boat belonged to his brother-in-law, James [S.] Arnold [1902-1956] of Southport, N.C. (U.S. Treasury Dept. 1945, 1955).4 Then for a period he worked the hill. That is, he met cars and booked parties for some of the headboats. In 1951 he began to run the Hobby which was my boat. He ran her until his son, Victor Earl Cox [1922-1971], took over in the late 50’s. The Hobby was
until 1937 when he bought his first sea going party boat, the \textit{Cadet}. She was about 46-48 feet long, powered by a Buick automobile engine. Captain Rob paid about $200 for her. She already had a career as a tug boat and a shrimper. Her speed was a breathtaking 5 or 6 miles per hour, which was pretty much par for the course at this time. The \textit{Cadet} was put on the hill during World War II and had to be rebuilt after the war. She was renamed the \textit{Sea Rambler} and used as a shrimp boat. She was sold in 1947. Rob lost an eye in 1947 and did the rest of his party work in the river.\footnote{4}

Captain Mintz also had several river boats. One was a 26 footer with a canopy called the “Pop Pop” because of the sound of the one cylinder Palmer “make or break” engine. His last boat from this time until he became ill was the \textit{Little Joe}. She was about 30-32 feet long and powered by a Continental Red Wing engine. Captain Rob passed away in 1957.

Some ladies were admiring the very large live oak tree that dominates the river front at the end of Mineola Avenue and observed that it must be very old. Captain Rob very seriously remarked to them, “It is. I was just a boy when it was planted.”

Captain Rob’s father, [Robert Allen Mintz 1864-1923], was a pioneer fisherman in the area, fishing haul seines on the beach and in the river. Captain Rob himself ran a haul seine fishery at Cherry Grove and Waites Island. Captain Rob’s sons also followed in his footsteps. [W.] Lacy [1925-1969], the eldest, worked on tugs and dredges for awhile, but also operated private yachts for business people. One was owned by ex-Senator Jim Waddell’s father. In the
'50s, he owned the party boats Victory and Bob Dan. One of Lacey's sons, Danny, works as relief captain on the Pride of the Carolinas. He has at one time or another worked on the Hurricane both for Frank Juel and Steve [Steven E.] Speros. He first mated on the Rascal for Vivian Bessent when he was 12 years old. Lacey's other son, Bobby, is in the party business running the Sea Screamer which is a 73-foot speed boat carrying people on sightseeing excursions in the waterway and off-shore along the Grand Strand beaches. He started out sneaking aboard his father's boat when he was 10 or 11 years old. He worked as a mate on the Helen Jean and ran boats for the Speros for eight years.

Rob's youngest, Bobby [E. 1934-1987], had several boats one of which was the Folly III renamed the Bob Dan when he sold it to brother Lacy. He ran parties at Murrells Inlet for a while and one of his boats was the Bon Jon. This last boat was sold to his uncle Donnie Mintz. "Winkie" Mintz, the third son, never did get into the recreational fishery other than helping out on party boats. He went into the Coast Guard, taught in the technical college system, and became a Baptist minister. His only commercial boat was a shrimpman.

Leroy, the second son, was most involved in the fishery. He mated on party boats from the time he was ten years old. He was a striker on the ill-fated Nightingale when she blew up in 1941 and by some accounts is credited with saving a number of the passengers (Charleston Evening Post 1941, Charleston News and Courier 1941). He makes little of being a hero. He, as a teenager, ran a private boat, Chickasaw, for John Barrier, the president of Pilot Life Insurance Co. Right after World War II, he shrimped the Sea Rambler for his family and then ran a charter boat, the Mark Twain, for A. D. Hinson. For a few years, he worked on boats in Florida, then came back to carry parties in 1961. He then operated the Carolina King for Frank Juel, taking parties to the Blackfish Banks and also to the Gulf Stream. He bought the Touchdown, a 43 foot air sea rescue boat, in 1962 and carried parties on her until 1969. He shrimped on his own boat, the 75 foot Tim Allen, in Florida until 1977. He then got back into the party business in 1980 when he bought the Windjammer from his brother, Bobby. She was 50 feet long and powered by an 871 GM. He renamed her Touchdown. In 1982 he bought his uncle Donnie Mintz's Bon Jon and fished her until she burned in 1991. He now has his own marine surveying company and looks back fondly on his coming up in the party boat fishery.

Lawrence Long was the very last of the early party boat skippers. He began in the mid '20s by taking river parties with his brother, Jerome, on the Hammer, the crew boat of the Hammer Lumber Company. She was 26-feet long and powered by a 7 HP Minimus gasoline engine. They would charge what they could get from $1 up for a trip. His best remembered boat was the Josephine. She was 60x5x4 feet and powered by a 30 HP Fairbanks Morse diesel. His uncle owned the boat at first and let Lawrence run it for half the profit. Lawrence said he made a lot of money for his share the first year which was in the early thirties. It carried 49 passengers at $1 each. Lawrence advertised that he went with one or 49 at $1 per head. Billy John (W. J.) Vereen recalls going one day with one paying fare when he got $2 as mate. This did not happen often and Lawrence, after buying the boat from his uncle for $400, captained the best known party boat at Little River. Other captains on the shore spoke of the Josephine as the Queen Mary of the Little River fleet and she was known throughout North and South Carolina as being bigger and better than anything afloat. The Josephine was sold in 1946 to be used as a freight boat. Captain Long next ran the Helen Jean for H. Vance Kinlaw [1916-1999] and then the Joy, a trolling boat, for Frank Juel. In the late '50s he built a trolling boat, the Cheryl Ann. It was 45 feet long and powered by a GM 671. He fished her until 1979 when he retired. The Cheryl Ann served as a floating part of Wayne Henderson's restaurant on the waterfront until she burned and was put on the hill in 1997. Captain Long passed away in 1998 at 93 years of age.

Lawrence instilled the love of the water in his sons and now the Long name is still prominent on the Little River waterfront. Larry [Lawrence C. Jr.], the eldest, has appropriately named his boats the Black Fish. He carries charter parties in the summer and fall and fishes traps for black sea bass in the late fall and winter. Now he more or less specializes in shark fishing parties and has a thriving business. He started this in the early eighties and sometimes makes two trips a day. His latest Black Fish is about 45 feet long and powered by a 600 HP Detroit Diesel. Another son, Billy Long, operates the Billy Boy, a trolling boat and headboat that is also used for commercial fishing. Ricky Long runs the Double R and Tommy the Captain.
Donnie Mintz was another early party boat operator coming into the fishery in the late thirties after a stint on the dredge Tampa. Donnie first worked as a mate on boats, one of which was the ill fated Nightingale. He ran shrimp boats also, operating the Eva Mae for Hugh McGinn in the mid-forties. He had the Mayflower built right after the war and then after selling her bought and fished the shrimper Charlotte with Clancy [E.] Lewis [1916-1985]. After this boat was sold, he went in with Bob High to purchase the Bennie Lane. He soon sold out to Bob. His next boat was a shrimper, the Betty Ann. After selling her, he purchased the Les from Adrian High in the mid-fifties. She was 43 feet long and powered with a Chrysler Crown engine. He carried parties in the summer and shrimped her in the fall. At this time the party business was mostly concentrated between Memorial Day and Labor Day, so it made sense to shrimp in the off season if a boat could be readily converted from one type of business to the other.

Donnie’s next boat was the Bon Jon which he got in the early 1960s. She was 50 feet long and powered with a GM671. He traded the Bon Jon to his nephew, Leroy Mintz. His next boat was the Rascal for Vivian Bessent on Sundays and I ran the Les for him. At that time Donnie’s son-in-law, Max Vereen, was running my boat, the Hobby, full time.

One story I recall about Donnie was when we were going down the river to go to sea. I was ahead of Donnie in my boat and he was a couple of hundred yards behind me in the Les when he suddenly stopped dead in the water. I started slowing down to see if he was having trouble, but shortly he got back underway. After we...
crossed the bar, I called him on the radio to find out what had happened. He informed me that he had just gotten a new pair of bifocal glasses the day before and when he looked over the side, the water was so close he was sure he was sinking. He had stopped and opened the engine hatch to see how high the water was in the bilge. We kidded Donnie about that many times. Max Vereen ran my boat for a couple of years before going into the oyster shucking business with his father-in-law [Donnie Mintz].

Frank [N.] Juel [1926-2006] was synonymous with deep sea fishing at Little River from the late forties into the eighties (Dunnegan 1994). He first became involved in fishing as a mate on the Josephine prior to service in the Navy during World War II. When he returned from the service, he operated the Martha Ann, a 45 foot headboat purchased by his wife who operated the hotel at that time. In 1947, the Juels bought a war surplus 63 foot air sea rescue boat. They paid $2,500 for it but had to spend quite a sum to reconfigure it for party fishing. Its original power plants were Hall Scotts that used 100 octane gas and gave it a cruising speed of 40 knots. These were replaced with Gray Marine 671s after one year because of the price and difficulty of getting 100 octane fuel. The hulls were very strong because of double planking, the inner ply on a bias with the outer which ran fore and aft. Frank felt he needed even more strength so he also had a keel placed in her. This was the first Hurricane.

The Juels bought two more 63 foot air sea rescue boats. One became the Hurricane II and was run by Chris [A.] Juel [1896-1963], Frank’s father. The other was the Sporty and was captained by Billy Brown. Frank also owned the Ocean King for a while. She was 90 feet long, very narrow of beam, and drew about 6½-7 feet. Once at sea, she was surprisingly fast considering she was powered by two Cummings diesels of only 165 HP. She was captained by Leroy Mintz. About 1950 Frank initiated Gulf Stream parties and the Hurricane and the Ocean King were the first to carry them. They would leave the dock at 7 to 8 p.m., run for 4 to 5 hours, fish until 10 or 11 a.m. the next day, and return to the dock at about 4 p.m. The fare was $15 per head for the first couple of years and then went up to $25.

The next two boats the Juels had built. They were 65 feet long specifically designed for headboat fishing. One was very broad beamed and had three engines. Frank then got an 85 foot air sea rescue boat that had been used to make the film PT-109. It had two GMV 12s. Looking for more speed he bought a 77 foot aluminum hull vessel with two V 12s. This vessel cruised at 22 knots, thus allowing the Gulf Stream parties to be a one day trip. Just about all of Frank’s boats were named Hurricane and this gave him good name recognition. He hired Claude Dunnegan in the late ’50s and early ’60s to do promotional work for him and many of the photographs contained herein were taken as a part of this effort (Anon 1994).

Frank sold out to Gus Speros [1923-1996] in 1976. Since that time, he has run boats for the Speros and owns a sport fisherman, the Tempest, which he charters for trolling inshore and for Gulf Stream parties.

A story told about one of the people Frank had hired as a mate concerns the trip back from winter work in Florida. The fellow was not adept at steering by the compass so Frank pointed him out a star to steer toward. Sometime later, after steering in circles for an hour or so, the fellow woke Frank up and asked him to point him out another star as he had passed the first one.

Frank’s son, Danny, has followed in his father’s footsteps and is active in the party boat business. He ran the 85 foot air sea rescue boat Hurricane for a while and also worked on boats in the Bahamas. From 1989 to 1994 he ran the Captain Juel II. He is now the captain of the Pride of the Carolinas, a 90 foot aluminum hull headboat. She fishes on the Blackfish Banks and in the Gulf Stream.

Frank’s father, Chris, also was involved in the sportfishery. He bought a small shrimp boat, the Mildred Mary and for several years fished for shrimp. After World War II, he began to use her for party fishing. In the early ‘50s he fished the Hurricane II for

---

light, flat-bottomed rowboats] to people for river fishing. The Riverside Tavern had rooms for rent at one dollar per night in the late '40s and early '50s. It was also the site for square dances with local musicians and later other dancing with music supplied by the “Juke Box.” In the 1950s, it was a common occurrence to have an impromptu country music concert at the Tavern with Vance, Jerome Long, Victor Cox, and others entertaining the river front crowd on Sunday afternoons.

Lawrence Long first fished the Helen Jean. She was built as a shrimp boat and was 55 feet long and powered by a GM 671. Olin [F.] Carter [1908-1982] was the next captain, and then Bill Clemons. She was lengthened to 65 feet after Hurricane Hazel in 1954. The Johnnie Jr. was about 46-48 feet long and operated first by Will Blake and then David Clemons. The cost of the Johnnie Jr. was about $2,000 in 1947. A second Johnnie Jr. was built in 1971 at about a cost of $8,000-10,000. She was operated by Joe Elliott and then Leonard Elliott. The second Helen Jean was built in 1974 at a cost of $18,000-20,000. She was 70x20x5 feet and powered by twin GM 671s. Captain David Clemons ran her. Both boats were sold in 1983.

Vance designed the Slow Poke and had her built by Jerome Long. She was 24 feet long and used for river parties and on occasion, a black fish trip.7

Vance and Helen closed the Riverside Tavern in 1990. It remained closed until 1997. It appeared that no one was willing to put in the long hours and have the patience to take on operating it until Steve Speros bought it in 1997. The movie Lolita was filmed in and around the Tavern in 1995.7

Vivian Bessent was an early entrant to the party boat business. He worked on dredges in Florida and...
South America before buying the Molly from Bob High in 1948. He ran her in the summer for a couple of years before giving up a winter job on the dredge. He bought one of the 63 foot air sea rescue boats in 1949 or 1950 in partnership with Mettler Vereen. After converting her for party boat work, he became a full-time member of the recreational fishery at Little River (U.S. Dept Treasury 1955). She was named the Rascal and he fished her on the near shore Blackfish Banks and later offshore. He bought the New Rascal, another 63 foot air sea rescue boat, in 1961-62 again in partnership with Mettler Vereen.

He bought out Mettler in 1963 and continued to fish her until he sold out to Joe Elliott in 1975. He and Mettler also built the Blue Heron restaurant on the waterfront and for several years hired people to run it or rented it out. Vivian took his religion seriously and in his later years did not fish on Sunday. Donnie Mintz ran the Rascal on Sunday and I ran Donnie’s boat, the Les.

Bill Bessent was another of the early boat men at Little River. He worked on several boats and was at one time the captain of the Nightingale. He fished the shrimper Charlotte for Clarence [C.] McCorsley [1886-1943] before it was sold to Donnie Mintz and Clancy Lewis. He bought the Eva Mae from Hugh McGinn and fished her until he sold it to the Clemons brothers in 1952. He then purchased the Marsella and kept her until the late fifties when he replaced her with the Betty Rae. These boats were around 42-45 feet long, powered by Chrysler crown engines, and used chiefly for trolling inshore. Bill also had the contract to maintain buoys and lights at Little River for several years.

Sam [P.] Gardner of Myrtle Beach brought the Carolina Queen into the party boat fishery in the early 1950s. She was an 84 foot war surplus hull refitted for party fishing. James Ivey Stone ran her, along with a Captain Miles and Bill Copeland. She was docked beside the draw bridge across the waterway from Bellamy’s Crossroads, but parties were solicited at Little River. She was relocated to Atlantic Beach, N.C. after an attempt to carry parties from Gardner’s Ocean Plaza Pier at Myrtle Beach did not work out. Sam had earlier owned an 85 foot yacht, the Patricia, that carried parties on occasion.

Mettler Vereen brought in the largest of the headboats up to this time when he purchased the 104 foot Ocean Queen in the mid fifties. She was another war surplus craft. She was docked at Vereen’s Marina but also stopped to pick up passengers at a dock at Little River. Her deep draft made it necessary to have a flexible fishing schedule to accommodate the tide on the river bar. On occasion low tide and rough seas forced her to come back through the inlet at Southport, N.C. and run down the Intracoastal Waterway to Little River. The Ocean Queen was struck and sunk by a freighter in Charleston, S.C.’s harbor on 16 November.
1965 as she was being repositioned to Florida for the winter. She sank with the loss of one person (Bowles 1965, Workman 1965).

Early river boat captains other than those that carried deep sea parties were Jerome Long, Lawrence’s brother, and J.B. Lockamy. Captain Jerome had worked with Captain Lawrence Long very early as a river boat man, probably helping him run the Hammer for Bob High. After WWII, he owned the Rueben and ran her until he retired. She was a 24 foot outboard powered bateau.12

Captain J.B. Lockamy carried parties prior to WWII in open row boats. Rowing them four or five miles down river and back, sometimes getting just $3 for the boat load. After the war, he bought the Beatrice from Captain Victor S. Cox and fished her until he retired. Captain Lockamy was a man of simple tastes. Never known to curse and never owned a car or television set.1,4 His most violent expression was "Great Dow". One day the Beatrice got caught under the dock and was swamped when the tide rose. When Captain J.B. came down and saw her awash, his only observation was, "Great Dow, look at the Beatrice."

Jimmy Stevens spent most of his time fishing out of Murrells Inlet, Calabash, and various parts of Florida. He was, however, part of the Little River scene on several occasions. He ran the Martha Ann for the Juels and also the Sea Buster and Little Shrimp around 1948. He owned several boats named the Bonita and on occasion he fished them from Little River docks.22 He bought an 85 footer, a Bonita, from Montauk, N.Y. in 1980. She was fished from both Calabash and Little River. She was powered by three 671 Detroit diesels, giving her a speed of almost 15 miles per hour. It took her about an hour to reach the fishing banks lying 10 miles off the bar, thus making her ideal for half-day fishing trips. She was sold after the fishing season of 1985.23 Captain Stevens’ next boat was the 90 foot New Captain Jim. She was fished for awhile out of Little River and was sold to the Speros in 1990 along with Captain Jim’s Marina at Calabash, N.C. This boat was then renamed the Hurricane II.22

Joe Elliott worked with Vivian Bessent on the Rascal in the ‘50s and ran the Johnnie Jr. for Vance Kinlaw and also captained the Tradewinds and Hurricane for Frank Juel.7,8 He began half-day trips on the Tradewinds. Joe bought the Rascal from Vivian Bessent in 1975 and ran her for several years before retiring.20

Joe’s boys, Ed and Randy, have followed in their father’s footsteps. Both helped on the Rascal. Randy, the eldest, commercial fished on the Blue Seas for several years before getting a charter boat, the Venture. This boat is a modern 32 foot fiberglass vessel powered with a 378 HP Detroit diesel.24

Ed operated the Johnnie Jr. for L.D. "Tink" Benton in the mid-eighties and then the Cyclone for the Speros until 1994. He has operated his own boat since then. It is a 32 foot fiberglass trolling boat powered by a 325 HP Caterpillar engine. She is named the Lucky Strike and fishes from a marina located at the foot of the old Highway 9 Intra-coastal Waterway Bridge.24

[Ronald R.] “Pat” Bellamy [1927-1994] got into the recreational fishery in the early fifties. He first owned the Elselma, a yacht that was used as a trolling boat (Myrtle Beach News 1954b).4 He named his subsequent boats the Ron Tom after his sons. He had a trolling boat and then a headboat. They were docked at the Ron Tom Marina which was about two miles up river from the town docks at Little River. Pat also ran a boat repair facility using a Travel Lift to haul boats. Pat got out of the party business in the mid-seventies and was magistrate at Little River for a while.

Terry Coffee started in the fishing business working with Frank Juel on one of the Hurricanes. He worked on the New Rascal in 1980 with Joe Elliott and then ran the Virginia R in the mid-eighties. Most recently he has served as captain of the Pride of the Carolinas. This was a stint of about ten years. In 1997 he took over the Fish Screamer.25

Billy John [William John] Vereen [abt. 1919-2000] was involved in the recreational fishery as the operator of yachts used by corporations to entertain executives and customers. Billy John began his fishing as a mate on the Josephine for Lawrence Long. He made a trip on the Josephine in 1938 to pick up YMCA campers at Mars Bluff, S.C. on the Pee Dee River and bring them to Camp Nixon.8

Billy John operated L. M. Boyd’s yacht, the Lois Ann, for a couple of years and then the Flying Fish for Paul Russell. These were North Carolina industrialists. He took the Flying Fish to Florida and Bimini in the winter. He ran parties now and then on Mr. Russell’s boat, the Russwood (Myrtle Beach News 1954b). She
was a 52 foot Huckins FairfaiTI Flyer. Captain Vereen retired as operator of a Charleston Harbor pilot boat.6

Les High, Bob’s brother, was one of the first to carry parties offshore, but he died young and was active for only a short while. His son, Adrian, owned the Les and, during the 1950s, he ran parties in the summer and shrimped in the winter. He sold his boat to Donnie Mintz and moved to Florida, where he ran shrimp boats until he retired.1,4

Robby Scarborough now operates the Sundancer.
He carries up to 20 people to the black fish banks or to the Gulf Stream. In the past he ran the Virginia R, Boss Hogg, and Sea Gypsy.26

Robert Small carried parties on the Cheryl Ann, the Swift Ship I, the Shannon Maria, and in 1997 started on a 36 foot trolling boat, the Small Boys.27

The Sophie, carrying 35 people and run by Captains Leonard and Marlowe, was advertised as fishing from Little River in 1938 (Myrtle Beach News 1938).

Others who operated vessels from time to time included Lenzy [H.] Carter [1924-1958] who ran the Mar- bill both at Little River and in Florida; Gerald Nixon who operated my boat, The Hobby, for a short while; Bobby Gore who ran the Joy; Bill Brown on the Sporty and Hurricane II; and William Scott, the Viola III between 1950 and the mid-70s. In the period between the mid-70s and late-80s, the following were active: Neil Juel operated the Golden Lady; [Jimmie Edward] Jim Williamson [1936-2006] the Big Mike and The Other Woman; Ed Lenke captained the Sea Gypsy; Roger Owens the Amberjack; B.E. Lewis on the Tom Cat; Larry Platt on the Dolphin and the Carolina Princess; Chip Stevens on the Cyclone; and Norman Bligh on the Carol Annes Bounty (Moore 1977, Moore et al 1980, Moore et al 1985).

Nearly all boys growing up around the waterfront worked as mates on the boats. Many of them ended up operating boats but some went on to other things. Some of those who did not end up as captains were Willie Todd, Herschel Williamson, Buddy Dennis, Marion Cox, Jennings Vereen, Ronnie Nobles, Bobby Todd, “Termite” Williamson, William “Pompano” Elliot, “Bucky” Elliot, Corbin “Spider” Elliot, Joe Livingstone, Michael Brown, Thomas Gore, “Winkie” Mintz, Johnnie McCorsley [1898-1996], Russell Carter, L.D. Tyler, Jimmy Bessent, Tommy Bessent, George Bessent, Richard Sanders, and Herman Humphries. Frank Juel would hire vacationing college students on his boats.

Hugh McGinn was only peripherally involved in the recreational fishery. As a young man he worked for the Corps of Engineers, was a hard hat diver and worked with underwater repairs and explosives. He finally ended up in the commercial shrimp and fish business at Little River. In the 1920s, he rented bateau to people and particularly the Corps of Engineers when they were surveying for the inland waterway. He caught and sold bait shrimp to recreational fishermen as a teenager in the ‘20s. Sometimes he made over $30 in a day selling a gallon paint can full [of bait fish] for $1. He carried people river fishing in the ‘20s and was paid what they wanted to give. He owned a shrimper, the Gilda and Don. On two occasions took parties on her providing fish boxes for the people to sit on. Hugh was also contracted to maintain the buoys and lights for the U.S. Coast Guard at Little River Inlet.1

McGinn recalls commercial hand line fishing for black sea bass right after World War II and catching 950 pounds in a day with help from one other man. Poting from his shrimp boat, the Chippewa, in the early 1960s, he also caught 9,000 pounds on one trip.1 The Chippewa incidentally was one of the boats taken over by the Government in World War II. Two 50 caliber machine guns were mounted on her and a rack for depth charges. Hugh bought her in 1946 and remarkable catches were made with her. She was finally sold along with the fishing facility to Frank Juel when he retired in 1971.

One great story about Hugh appeared in the Myrtle Beach Sun News (Berry 1996c). Hugh was fishing off McClellanville and hit a real, large concentration of shrimp. When he loaded the Chippewa, he wanted to mark the area so he could return the next day. Knowing that other boats would come to a buoy, he caught a pelican that had become entangled in his try net and sprayed it with green paint, tied a line with a weight on it to the pelican’s foot and threw it over the side as a marker. He came back to this marker for several days feeding his bird generously with fish after he had gotten another load of shrimp. After the concentration of shrimp moved on, the pelican was released. He often wondered what the Wildlife Department would think of a green pelican if it ever came to their attention. Some envious of Hugh’s success claimed he had not released the bird, but cooked and ate it.

Wayne Henderson has been a fixture on the water-front for years. He has run a fish house, a clam depura-tion plant and a restaurant. Over the years he has bought and sold several boats. On occasion Henderson has taken parties on them but has never really con-centrated on this end of the business.28

Gus and Steve Speros moved to Little River in 1973 from Maxton, N.C. Steve, Gus’s son, got a job mating for Captain Frank Juel and in 1976 the Speros bought out Frank. Steve operated the Scuba and the Hurricane himself for a while. They expanded their business buying the Thunderbird II from John Frick and the Captain Jim from Jimmie Stevens in 1990. They also bought Captain Jim’s Marina at Calabash, N.C. from Captain Stevens. They now operate vessels from Vereen’s Marina, Calabash, and Southport, N.C. Gus
passed away in 1996 and Steve now operates the business. He maintains a ticketing office at Little River. The Hurricane Fleet, as it is now identified, offers all types of water related opportunities including half-day inshore trips, Gulf Stream parties, trolling trips, shark fishing, dinner cruises, dance cruises, and chartered events.29 Steve recently bought the Riverside Tavern from the Kinlaws. He plans to sell sundries and open a restaurant on the premises.

L.D. "Tink" Benton became a fixture at Little River in 1980. He bought the hotel, the marina, Mary Juel's old house, and the restaurant that had been operated very successfully by Mary Juel for many years. He bought a 90 foot Aluminum hull vessel, the Pride of the Carolinas, about this time and has operated her as a party boat since. She is licensed for 80 passengers and has been run by several captains beginning with Larry Platt, then Chip Stevens, and for ten years Terry Coffee. In 1997 Danny Juel took her helm. "Tink" had the Sundancer built in 1982. She is a 40 footer powered by a 692 Detroit diesel and carries charters of up to 20 people. The Sundancer is run by Robby Scarborough.29

Mr. Benton’s active advertising campaign was designed to bring the crowds back to Little River. At times he uses television, newspaper, and beach magazines, along with brochures, to draw attention to fishing opportunities at his operations.29

Mac Nobles, a familiar fixture on the waterfront from the 1950s through the 1970s, was probably the best mechanic ever to work on the boats. He was equally at home with a diesel or gasoline engine. Too accommodating for his own good, Mac often worked through the night to get someone to sea the next day. Hardly any boatman around was not obligated to him in one way or another. Mac’s son, Ronnie, worked as a mate on boats and was associated with Jimmy Stevens for several years. He built a beautiful model of the 85 foot Bonita which is on display at the South Carolina Marine Resources Research Institute. Ronnie now has his own construction company.23

James Ivey Stone worked for several of the boat owners for many years, including Frank Juel, Sam Gardner, Mettler Vereen, and others. He was a talented mechanic and electrician as well as a good seaman. He often did much of the boat handling on the Ocean Queen and Carolina Queen when they were carrying parties. He converted military radios for marine purposes and several boats, including mine, had examples of his handy work on board.1,4

Kenneth D. Nobles, a West Virginian, came to Little River in the late 1970s. He was involved in the cable television business, but became interested in the party fishing. He bought the Helen Jean and Johnnie Jr. from Vance Kinlaw and then the Bonita from Jimmy Stevens. He bought the Tradewinds IV from Frank Juel and also added the Boss Hogg and Virginia R to his fleet. The Boss Hogg was later sold to Gus Speros. Nobles also brought in a commercial boat, the Captain K.D., and entered into a lease/buy agreement for Hugh McGinn’s fish house. Nobles is no longer involved on the waterfront at Little River and all of his vessels and fishing facilities have been taken over by others.1,4

The Fleet Over the Years

From the beginnings until 1930, probably only four to five headboats owned by Bob High, Les High, Victor Cox, Rob Mintz, and Liston [L.] Thomas [1902-1990] made up the party fishing fleet. Fares ran from $.50 to $1 per person for a full days fishing.1,2,4 During the thirties the number of boats increased to probably a high of eight or nine just before World War II. The general price was $1 per person for an all day trip (6 to 8 hours).4 In the late forties war surplus boats came into the fleet and there were probably 10 to 12 boats fishing at one time or another. The fare was $2 per person. In 1956, the gasoline powered vessels were restricted to six passengers by the Merchant Marine Act of 1956. This led to a differentiation between headboats and charter boats (six passengers or less). At this time there were about nine headboats and eight charter boats. A day to the Blackfish Banks was $5, to the Gulf Stream $15, and a charter $35-$60 for 4-6 people.

The boats shown in the Along the Coast magazine in 1960 fishing out of Little River, plus a few others missed when the picture was taken, totaled six headboats, nine charter boats, and four river boats (Darby 1960). The largest of the boats, the Ocean Queen was licensed to carry 175 passengers. The rates had increased to $6 for inshore headboat fishing, $15 for the Gulf Stream, $50-$60 to charter a boat and $15-$20 for a party to fish in the river. Moonlight cruises were $2 per person.

Bearden (1969) reported eleven charter boats and four headboats operating from Little River. He listed costs per day on charter boats at $80 to $200 per day for the boat. Individual costs on the headboats were $8 to $12 for a blackfish trip or $20 for a Gulf Stream trip.

In 1973, seven headboats fished out of Little River (Huntsman 1976b). There were at least ten charter boats and one river boat (Anon 1974, Bearden and McKenzie 1973). Headboat fares ranged from $8-$13 for inshore trips and $20-$25 for Gulf Stream trips.

The fleet in 1977 was made up of seven headboats, eight charter boats, and one river boat. Fares had increased to $10 per half-day trip and $15 per whole day trip for inshore bottom fishing; $30 for a Gulf Stream trip; and had jumped to $200-$250 for an inshore trip and $450 for an offshore trolling trip on charter boats (Moore 1977).
Moore et al (1985) listed five headboats and eight charter boats docked at Little River. Some of the headboats carried up to 100 passengers.

A tally by the National Marine Fisheries Service (Dixon 1997) listed three headboats and ten charter boats. Headboats charged $26 half-day, $60 for Gulf Stream fishing, and $65 for shark fishing. Charter boats ranged from $375 for a half-day trolling to a 16-hour marlin trip for $1200. Moonlight cruises were $8 per person with dinner cruises, ocean cruises and a variety of other seagoing excursions offered.

Only one large headboat is fishing out of Little River in 1997. This is the 90 foot Pride of the Carolinas and it concentrates on half-day trips during the week with one Gulf Stream trip on Saturday. Ten or twelve charter boats still sail from the docks at Little River. No river boats were reported.

The Fishing Grounds

Prior to World War II all the ocean fishing took place on the Blackfish Banks. Blackfish, which is the familiar name for black sea bass, has dominated the fish assemblage in these habitats and is responsible for their name (Struhsaker 1969). These were located 5 to 25 miles offshore in depths ranging from 40-120 feet (Struhsaker 1969, Moore et al, 1980, 1985). The fish were congregated on patches of rocky outcrops which provide substrate for attached organisms. These attached animals such as hard coral, soft coral and bryozoans provided food and shelter for mobile organisms as shrimp, crabs, and mollusks which in turn were fed on by black sea bass and other large fish. These areas are commonly called live bottom or Blackfish Banks (Bearden and McKenzie 1973, Sedberry 1988, Struhsaker 1969).

In the early fifties some of the headboats began to take parties on overnight trips to the snapper-grouper banks. These trips were referred to as Gulf Stream trips (Bearden 1969). These areas range up to 50 or more miles offshore in depths exceeding 80 feet (Moore et al, 1980, 1985, Huntsman 1976a). This area, the outer continental shelf, contains two different habitats that attract and concentrate fishes. One, the area lying between depths of 90 to 180 feet, is characterized by low relief patches of coral and rocky outcrops. The other, lying further offshore in 180 to 600 feet of water, is the area of the continental slope. Water temperatures on the outer shelf are influenced greatly by the warm Gulf Stream moving north along the shelf break. This results in most of the fish being tropical or subtropical species (Huntsman 1976a,b, Huntsman and Macintyre, 1971). The snapper-grouper complex, as it is known, is made up of many species of popular food fish such as red and vermilion snapper, red, warsaw, snowy, gag and scamp groupers, rock and speckled hind, tile fish, porgies and grunts (Huntsman 1976a,b).

Fishing for pelagics by trolling boats takes place from almost in the breakers for Spanish mackerel to the outer shelf for marlin, sailfish, and yellow fin tuna. In between the catch may include king mackerel, dolphin,
bonita, and bluefish. Most of these fish are abundant late spring through fall. (Moore et al 1980).

Shark fishing takes place inshore where the shrimp boats operate. Sharks are often caught in the area where the shrimp catch is culled.4,12

River fishing catch varies by time of year with best spot, whiting, and croaker catches usually in the fall. Weakfish, red drum, and flounder are present all year but are caught mostly in the summer and fall. Spotted trout are caught just about year round (Bearden and McKenzie 1973, Moore et al 1980).

The Catch over the Years

The earliest fishermen were out to catch the most and the largest fish possible. They were referred to as “meat fishermen.” Sometimes a group would come from upstate North Carolina or South Carolina prepared to take home really large catches of fish, even a pickup truck load. At first some of these fish were probably sold or given to friends, but later with the advent of home freezers, large catches provided table fare throughout the winter. The captains made great efforts to satisfy their customers and to impress their peers. Lawrence Long recalls a catch on the Josephine which after the anglers left with all the fish they could handle, he was left with a small truck load, which he gave to a man parked on a hill who then sold them to others.2
In the 1950s and ‘60s, catches of several hundred Spanish mackerel in a day were common. Bill and David Clemons brought in 565 on a day trip on the Eva Mae. A party from Concord, N.C. caught nearly that many on my boat the same day.

Mary E. Platt [1905-2002], a long time resident of Little River, recalled fishing with the Juels on several occasions. On one trip in the 1950s, she bought back 47 blackfish which probably weighed nearly 100 pounds.31 Faye Mintz fishing in the 1960s with her father-in-law, Rob Mintz, caught 177 spot on a river trip.32 In the fall, many times, a party would catch several 50-pound lard cans full of spot fishing in the river.4

The Gulf Stream parties would nearly always load the display rack on the hotel dock. One trip I made with Frank Juel in the early sixties had as its purpose to catch fish for Mary Juel’s restaurant. Six of us filled every fish box between 6:00 and 9:30 a.m. on a Sunday morning. We were glad to put away the fishing gear and head for home.

As half-day trips became more popular, the emphasis on large blackfish catches necessarily had to change just because of shorter fishing time, but also because of the limited number of fish on inshore banks. Larger boats carrying more passengers also cut down the average catch because it was often impossible to find large concentrations of fish close to shore in the immediate vicinity of the inlet.

As the season progressed, the catch dropped as the banks became fished out. Low (1997) found that statewide average headboat catch per angler per day had dropped from 8.2 pounds to 1.3 pounds in the period 1977 to 1995. The decline of inshore catches may not be as great at Little River as in other areas because of the skill of the captains and relatively more area to fish. Charter boats carrying small parties still commonly bring in around ten pounds per angler when bottom fishing inshore.36 A new size limit of 10 inches total length on black sea bass will further reduce the number of fish brought back (Gaulden 1997).

The boats fishing offshore in the 1990s still brought in very respectable catches, not as consistently as in 1950s to 1980s, but sometimes over 50 pounds per fisherman. This is particularly true of charter boat parties. The offshore catch in 1977 was dominated by the red porgy, but in 1996 it was chiefly made up of vermilion snapper which may be indicative of excessive fishing pressure on the former species by this fishery (S.C. Dept of Natural Resources 1997).

Many fish are released alive today because of size and catch restrictions placed on the various species by state and federal regulations. However, more and more anglers are practicing tag and release and just enjoy the thrill of the water (Davy 1994). The Governor’s Cup Billfish Tournament awards points for released fish that are included to determine winners in various categories (Anon 1997b). Don Hammond, program leader for the S.C. Department of Natural Resource’s Finfish Utilization Program, estimated that prior to 1989, 90 percent of the billfish caught off South Carolina’s coast were killed. Now the figure has been reversed and more than 90 percent are released alive. Red drum size and bag limits, along with tagging, have been responsible for a strong recovery of this species (Keepfer 1997). This bodes well for the future availability of fish for the sportsman.

**Fishing and Navigational Gear**

In the beginning, customers fishing on the Blackfish Banks were furnished with hand lines. These were fashioned from #24 tarred cotton twine. They were about 100 feet long having two 6/0 hooks tied off on two loops just above a sixteen ounce bank sinker.4 When not in use, these were wound on a short piece of wood. Some of the boats had grooves worn in the rail from the dropping and retrieving of these lines. After World War II, rods and reels came into general use. The first rods were made of split bamboo and then later fiberglass. The hand lines were always provided free, but at first the rod and reels were rented for a small fee. Later rods and reels were provided gratis, and the hand lines phased out. Bait was usually salted squid, octopus, or cut up fish or salt pork and was furnished by the boat.

River boat fishermen used hand lines at first, but with smaller hooks and weights, but then they all went to rods and reels. Their bait was most often frozen shrimp that had been thawed.

Charter boats used rods and reels when trolling from the beginning. They used linen line at first, but then went to nylon, then Dacron or Monel. These rigs
always used stainless steel leaders and various lures or a rigged bait made from whole fish or cut strips.

The Gulf Stream boats first used three hand lines tied end to end and only one hook. Soon these were supplemented by rods with hand reels and then electric reels and also a crank reel that was made from a bicycle rim and pedals. Heavier sinkers and larger hooks were used. Bait again was usually salted or frozen squid provided by the boat (Huntsman 1976a).8

Later on light tackle was introduced by the individuals chartering boats. Some of these fishermen used spinning rigs.

Charters specializing in shark fishing use heavy gear with very powerful reels.

Many of the charter boats also rigged out two short hand lines with a rubber link or a piece of shock cord to keep the fish on the line. These were pulled from the stern and fished shorter than the regular trolling lines. The mate tended these lines and often they caught more Spanish mackerel and school bluefish than the party fishing rod and reels.

The first parties were seldom taken out of sight of land. Gause Hill, a very large sand dune which was several miles up the coast in North Carolina, was often used as a point of reference to locate the fishing banks and also to come home by. After 1929, when the Ocean would move back up to the buoy and make another drift. Sometimes the flag would be left overnight to mark a good spot.

Depth recorders came into the fishery in the late forties followed by fish finders which showed fish on a cathode ray screen. This made finding fish easier especially at the Gulf Stream. LORAN was the next navigational aid to be employed, first "A" and then "C." Now...
satellite navigation units are employed by the most sophisticated fishermen. This makes locating the fishing banks very much easier than in the old days.

Ship-to-shore radios were introduced to the fishery in the late 40s. Some were war surplus military tank radios converted to handle marine channels. First units operated on two or three channels, and then came VHF and now cellular phones are used by fishermen. Single sideband radios are used for communicating when far off-shore such as when marlin fishing.

The earliest engines to be used in the fishery were one and two cylinder gas engines. Some lacked reverse gears and were stopped or backed down by shutting them off and starting them back up in reverse. Two popular makes were Palmer and Lathrop, but there were many others.1,4 Automobile engines were popular during the thirties as well as marine engines built by Chrysler, Gray, Sterling and Continental. Conversion kits were available that were specific for certain automobile engines. Popular kits made by Osco and Barr Mfg. provided jacketed manifolds for cooling, flame arrester carburetors, oil coolers and reduction gears. Many people just used the automobile engines as they were with the same gear box.4

The Josephine was the first party boat to have a diesel. She was powered by a 30 HP Fairbanks Morse that gave her a top speed of 6-8 mph.2

With the passage of the Merchant Marine Act of 1956, the gasoline powered boats were relegated to carrying six or less passengers due to fire hazards. As time went by, more and more boats went to diesel so that now just about all the boats in the fishery use this power. Popular diesel engines over the years have been GM 671s and 11Os, Cummings, and Caterpillar. As boats got larger and speed was needed to get to the fishing areas faster, V12s were employed. Now popular engines are 600 HP Detroit diesels and 892 GM’s up to 735 HP.

River boats first got to the fishing spots by oar power. In the mid-thirties, outboards came into use by some. These early engines were somewhat unreliable and no one left the dock without a good set of oars. My uncle had a 21/2 HP “Waterwitch” which was sold by Montgomery Ward for less than $100. To my knowledge it never made a round trip to the fishing area around Tilghman’s Point near the mouth of the inlet. Hugh McGinn recalls operating an eight horse Elto outboard in 1927 for the U.S. Army Corps of Engineers. It had a hot-shot battery and was hand cranked in forward or reverse by a knob on the fly wheel. None of these engines got into the fishery so far as anyone can remember. Hugh McGinn did buy a 10 HP Johnson in 1940 for $160 which he used in the river.1 All outboard engines up until the fifties had integral gasoline tanks and were hand started with a pull cord wound around the fly wheel. From the early fifties most river fishermen began to use larger outboards (10-18 HP). In the sixties they got up to 35 HP and some were electric started. Rob Mintz always had inboards on his riverboats, first a one cylinder Lathrop and then a six cylinder Continental.

Vance Kinlaw and Sam Vereen rented wooden 16-18 feet boats to anglers for river fishing. At one time during the ‘30s, the fee was $1 per day.1,7

Both river and seagoing boats were most often repaired and maintained by the owners and crew. For many years, bottoms were cleaned and painted by putting the boat aground at high tide. When the tide went out, the work was done and the boat refloated on the next high tide. Sometimes pine straw was burned under the boat prior to painting to cause enough heat to kill any worms that were present. The bottom planks retained enough moisture to keep from catching fire. At that time, anti-fouling paint was usually applied to a wet boat bottom. When twin screws came in, careening was no longer possible.3

Off-Season Employment

The first party boat fishermen had to depend more on their off-season activities to make a living than the summer recreational fishery. In the beginning party fishing was confined pretty much to the period corresponding to the school vacations, Memorial Day to Labor Day. After the party boat fishing season, many of them converted their boats over to shrimping.4,7 Some of these were Bob High, Rob Mintz, Victor S. Cox, Bill Bessent, and Donnie Mintz. Rob Mintz also helped operate a beach seine fishery at Cherry Grove Beach for Mr. Luther Wilson.4 Late in the fall some fishermen moved from the beach seine fishery to the river to set gill nets for spot and stop seines for flounder. Victor Cox ran his boat, the Edward, through Sheep Head Creek to carry fish caught in Lucian Bryan’s beach seine on Waites Island to market in the mid-1920s. The fish were salted and packed in 100 pound kegs.1 Several men clammed and oystered. The Prince, a former purse seiner that had fished for the fertilizer factory, carried their catch north to Wilmington, N.C.1 Seafood on many occasions during the 1930s Great Depression was bartered for farm products.4,17

Following World War II, more opportunities for off-season work became available. Some worked at the nearby beaches in construction. Others extended their fishing season by taking their boats to Florida or getting jobs on boats down there.8 This group included Frank Juel, Jimmy Stevens, Olin Carter, Leroy Mintz, Danny Juel, and others. Some such as Victor S. Cox, Victor E. Cox, Hugh McGinn and Leroy Mintz went south with the shrimping fleet, Leroy and Hugh operating their own boats and Coxes building nets for others.1,3,4,33
Victor Sloan and Victor Earl Cox opened an oyster shucking house in the mid-fifties. They shucked oysters using the Pringle Heat Shuck method and packed them first in glass jars and then lithographed tin cans. I distributed these in the Pee Dee South Carolina area. After the Coxes went out of the business, Donnie Mintz took over their trade and ran a shucking house up until the 1970s.

Jerome Long was a skilled boat builder and spent his off season repairing or building boats for others. He was also a very good barber and operated a shop in the building that Dr. Stone used for an office. Lawrence Long spent two of his winters building his own boat the Cheryl Ann.

In 1960 Frank Juel initiated blackfish potting. He was very successful in catching fish, but not very good at making a profit at it. He recalls selling nearly a hundred boxes of blackfish for $12 per 100 pound box. Lawrence Long’s sons, Larry, Billy, and Ricky, have continued blackfish potting and the economics involved are much better now.

Of course, every boat owner and many operators devoted much of their spring to getting boats ready for the summer season. The season also has been extended so that many are taking parties as late as November and as early as March.

The Fishermen

Very early, locals came to Little River probably to fish or to help with the haul seines at Waties Island. Later folks from around the Charlotte and Gastonia areas of North Carolina started coming to the Little River area. They camped on the waterfront and sometimes stayed a week or two. They travelled in T-model Fords and other early makes of cars, taking a dirt road from Whiteville, N.C. to Longs, S.C. and then to Little River. From the beginning, people from that part of North Carolina made up a large contingent of those fishing at Little River and this has remained so to this day.

Most people coming to the coast from middle and upper South Carolina had a more circuitous route to travel. They went from Conway straight to Myrtle Beach or through Wampee to reach Ocean Drive and Cherry Grove Beaches. [With the building of the Intracoastal Waterway in the 1930s, existing roads were improved with the creation of Highway 9 in a more direct route from eastern South Carolina.] This route was paved in the late 1930s and increased the number of visitors from middle and upper South Carolina. The Intracoastal Waterway Bridge also linked up what is now Highway 17 and made access from Myrtle Beach and other areas much easier. In recent years strong efforts by North Myrtle Beach and Myrtle Beach Chambers of Commerce have brought people from all over the world into the area and many have taken advantage of the fishing at Little River.

Some great tales involving some of the individual fishermen are remembered by the captains.

Victor S. Cox recalled a slightly inebriated soldier just after World War II who, despite all of Captain Victor’s efforts, spent most of his day at sea balancing on the rail of the boat or on the edge of the cabin. He fell off just as the boat tied up at the dock and had to be fished out of the water.

Another time a man drank a vast amount of whiskey on Frank Juel’s boat and became belligerent. He began to threaten the crew and passengers with a knife and Frank, in his efforts to control the man, shot him in the shoulder. This allowed the crew to tie him up. He was transported to Conway Hospital when the boat could get him ashore. He was very contrite when the alcohol wore off. He sneaked out of the hospital and went home. Shortly thereafter, he collapsed and apparently died of kidney failure (Dunnegan 1994).

One time Frank had a man aboard the Hurricane who had to put his wife on a trolling boat because she thought she would get seasick when the headboat began to drift while fishing. He asked to use the ship-to-ship radio to talk to his wife and tried to make her sick by talking about all kinds of queasy types of foods. This didn’t sit right with one of the mates; so, he made a salt squid sandwich with a lot of mayonnaise and offered the man a bite. Guess who got seasick?

By accident I discovered a fine seasick remedy. On a trip in the early fall, we began to catch octopus on hook and line. I saved a few for a science class that a friend taught. They were put on ice in a Styrofoam cooler and placed below in the cabin. One of the party had started feeling bad and had laid down in a ball beside the cooler. One of the octopi decided that he didn’t like the cooler and crawled out on the ailing man’s arm. This woke the man up and when he saw the creature on his arm made a mad dash up on deck. He stayed there for the rest of the trip and forgot about being sick.

Epilogue

What has become of this industry as it has matured seventy-five years after a small group of young men found a way to make a living carrying people into the ocean to catch a mess of fish? The boats have changed. Instead of a conglomeration of boats that had beginnings in some other field, the fleet is made up of high powered, high tech boats specifically manufactured for the purpose for which they are used. One boat now has more power than probably all the engines used between the industry’s beginnings and World War II put together and certainly costs more. It no longer takes a whole day for a trip to the Blackfish Banks.
A fisherman does not expect to feed his family all winter on the catch from just one or two trips as he did in the ‘30s, but is happy with a small string and a pleasant day. Tag and release is the norm for many species and all are concerned with doing what they can to persevere and increase the stocks of fish.

The river front is no longer a mad house of people looking for a place on a vessel or captains soliciting parties every morning during the summer season. Ticket offices handle most of the business for the headboats and most of the charter trips are booked by telephone. The season is not just from Memorial Day to Labor Day, but from March into November.

Little River itself has changed from a small village with two or three stores, to a bustling community with all the amenities one could want. Retirees from other areas now make up a significant part of the population. The river front itself, however, has retained much of its character. The main street has been paved and the docks are wider and better maintained. Other than that, it looks about as it did in the ‘30s.

Eating and lodging facilities have kept up with demand both in available rooms and cuisines offered. People are too sophisticated now, however, for the $1 rooms at the Little River Hotel and Riverview Tavern of the ‘30s and ‘40s that were cooled with whatever breeze that came through the open windows. However, nothing has taken the place of the meals offered by Mrs. Kate Vereen or Mrs. Mary Platt.

What is the future of the fishery? The pioneers, who dominated the scene up until World War II, are gone and their successors, the second wave that flourished up until the eighties, all have called it a day. The third group, some of the sons of the first and second contingent, is now the old guard. A new generation is on the way. Some are first becoming owners and captains and others are mates learning the ropes.

Like everything that has survived for 75 years, the party fishing at Little River has changed, but in many ways remained the same. The old crowd has made way for the newcomers. The old boats have been replaced by the new, but every year finds old and new customers boarding the boats eagerly anticipating what the day will bring. When the 100th anniversary of the founding of the fishery comes around early next century, sons will bring. When the 100th anniversary of the founding of the fishery comes around early next century, sons and maybe daughters of the present captains will surely be carrying out a new generation of fishermen.

Acknowledgements

I am particularly grateful to Mrs. Catherine Lewis [1924-1998], retired Horry County Librarian, and C.B. Berry [1919-2007], noted historian of the area. Both of them not only provided their published articles on the area, but also shared their valuable insights into many of the early events concerning Little River. The late Ralph Ellis and I spent several mornings going through his files documenting events in the fishery and recording his recollections. Frank Juel took several hours of his time to provide stories, fishing methods, boats and events as he recalled from his long and varied career. David Clemons in several sessions gave an insight into early boats and fishermen as well as outside occupations of the boatmen. Lawrence Long at 92 went back into the earliest days of the fishery and told me of his involvement. Larry, his eldest son, and I spent several productive sessions at his supper table as he brought me up to date on new fishing activities.

Vance and Helen Kinlaw provided much valuable information not only about their boats and their Tavern, but also about the early boatmen and their clientele.

Edward High, Captain Bob’s son, was able to provide details of his father’s boats and activities dating back to the first parties. I appreciated this valuable input.

Without the help of Leroy Mintz and Hugh McGinn, my task would have been impossible. Hugh, through his recollections, gave me an oral history of Little River, spanning his eighty-five years. He went over this paper straightening out where I was wrong and adding to it where needed. I thank him.

Leroy and I spent many hours going over events as he or I recalled them and documenting his and his family’s involvement in the fishery. Faye, his wife, helped greatly in dating many happenings. Leroy’s time went back to his teenage experiences prior to World War II. Paul Vernon provided photographs from the Dunnegan Collection which date back to the mid-fifties and I thank him for his interest in this project. Gilbert Maggioni researched the specifics of many vessels through his early published registries of commercial vessels and I do appreciate his involvement.

Asia Lynch patiently helped me get the paper in a readable form. Charles Barans, David Cupka and Glenn
Ulrich reviewed the manuscript and provided valuable critiques and I thank them.

Lastly, I have to thank those early fishermen who were my mentors and friends. Their stories of the beginnings of recreational fishing in the Little River area were instrumental in inspiring me to undertake this effort. So, to the late Victor S. Cox, Bob High, and Rob Mintz, I say thanks and ask their forgiveness if I didn’t get it just right.

The New Rascal in the late 1960s. Owned by Vivian Bessent then sold to Joe Elliot in 1975. (Postcard courtesy of Mrs. T. V. Bessent)
About the Author

Victor G. Burrell, Jr. [1925-2009] was director emeritus of the Marine Resources Research Institute of the South Carolina Department of Natural Resources. Dr. Burrell grew up in Florence, S.C. His first contacts with the Little River community began in 1935 when he was carried river fishing in a rented skiff by his uncle, Ted Burrell. Two or three of these trips a year became the norm up until about 1940. In 1937, Burrell was a camper at the YMCA camp at Cherry Grove Beach, S.C. It was the practice to carry the campers on an overnight camp out at what is now Ocean Isle Beach, N.C. The campers were transported there by a vessel chartered at Little River. In 1937 the boat hired was the Edward piloted by Victor S. Cox.

After a stint in the U.S. Navy during World War II, Burrell completed a B.S. degree at the College of Charleston and went to work in a family business in Florence. In 1950, he purchased a 41-foot boat built by Captain Eddie Gardner, a Charleston Harbor pilot, and started carrying parties on weekends from Vereen’s Marina on the Intracoastal Waterway. In 1952, Captain Victor S. Cox began running the Hobby during the week while Burrell operated her on weekends. This continued until 1958. Then Victor E. Cox took over for his father.

In the early 1960s, Donnie Mintz began to carry the Rascal out for Vivian Bessent on Sunday and
Seven Lose Lives Off Little River After Explosion

Excursion Boat Nightingale Sinks After Burning To Level of Water

All from N. Carolina

Four Bodies Are Recovered, While Coast Guardsmen Search For Others

Burrell ran his boat, the Les. On occasion Burrell ran private boats for people and filled in on other boats at Little River. In 1965 Burrell returned to school at the College of William and Mary and received a Ph.D. in Marine Science in 1972. The Hobby was sold to finance some of the schooling. Often when asked about her, Burrell says, “We ate her.” After graduation Burrell returned to South Carolina as a marine scientist at the Marine Resources Research Institute (MRRI) of the S.C. Wildlife and Marine Resources Department, where he became MRRI director in 1974 and retired in 1991.

Permission was granted by the SC Department of Natural Resources Marine Resources Division to publish in its entirety Victor C. Burrell’s “The Recreational Fishery in South Carolina: The Little River Story” Charleston (SC): South Carolina Department of Natural Resources, Marine Resources Division, Marine Resources Research Institute (Educational Report No. 19), which was published in 2000.

Four bodies recovered were those of T. W. Cothran and G. A. Barber, both of Salisbury, N.C. and E. R. Griffin and George R. Barfield, Jr., of Rocky Mount, N.C.

Unaccounted for were Grey Barber, Jr., and Jerry Barber, brothers, sons of G. A. Barber, and Shelton Lesler, of Salisbury. They were given up for dead and coast guard boats from Wilmington, N.C., some fifty miles from here, were searching for their bodies as darkness came.

All others of the thirty-nine passengers were picked up by two other excursion boats. Mrs. G. A. Barber was taken to a Conway hospital suffering from shock where some ten or twelve others were also treated for minor injuries.

Piloted by Douglas Sebastian

The Nightingale was owned and piloted by Douglas Sebastian of Beaufort. At the time of explosion the boat was approximately twelve miles at sea, within several hundred yards of the yacht Edward, piloted by Victor Cox, and the yacht Cadet. The Edward played a bit part in rescuing the Nightingale's passengers.

The explosion reportedly occurred about 1 o'clock, and the rescue boats arrived here at 3 o'clock.

W. A. Warton of Rocky Mount, one of the passengers aboard the Nightingale, said that members of the crew, because of engine trouble, had been pouring gasoline from a five-gallon drums [sic] into soft drink bottles to be fed into the carburetor. In doing so, he said, a good amount had been spilled, where apparently it had been ignited by a carelessly thrown cigarette or lighted match.

The explosion, Warton revealed, destroyed most of the boat's life belts, leaving only three or four to be used by the passengers. All jumped overboard, he said, immediately after the explosion, and it was believed that the seven victims were drowned rather than having been killed by the blast.

All in One Party

The passengers were all members of a fishing party on a Sunday excursion. They had planned to sail from Southport, N.C., but were unable to obtain a boat there large enough to accommodate the entire party. All were said to have been employees of a soft drink bottling company.

Those rescued were hauled aboard the two other excursion boats by means of ropes after clinging to wreckage of the Nightingale and the few undamaged life belts while watching the boat burn to water level, then to be swallowed up by the sea.

Attaches at the Conway hospital, where the injured were taken, said that none seemed to have been seriously injured but were suffering from shock and bruises.

The bodies of Griffin and Barfield were taken to the Goldfinch funeral home in Conway, while the bodies of Barber and Cothran were taken to the Winstead funeral home at Myrtle Beach.

Coroner John Dix of Conway arrived here late this afternoon and said that an inquest would be held. The time has not been decided.
Passenger List Given

Myrtle Beach, May 18 – (UPS): There were sixty life preservers on the Nightingale, the Cadet pilot said. Some of them were flung into the water and passengers leaped after them. All of the persons were urged to don the life belts and leap, but in the confusion the order was partially ignored. One of the last to leave the boat was young Leroy Mintz, son of Pilot Robert Mintz, who helped passengers into the safety belts. Leroy, about ten, had been selling soft drinks as a member of the crew.

The sea was too rough for the Cadet to come in close for rescue work, the captain said. The survivors praised the courage of the crew's working under such difficult conditions.

Most of the survivors were burned about the face, legs and arms. Those aboard were:

- Mr. and Mrs. F. B. Sloop, Salisbury;
- W. H. Griffin, Salisbury;

Injured Persons Named

Little River, May 18 – (AP): Injured passengers of the Nightingale treated here were: Libby Ann Barber, daughter of G. A. Barber; a daughter of T. W. Cothran; Bruce Cannon of Kannapolis, N.C.; Guy Daniels of Dillon, Elbert Griffin of Rocky Mount, N.C.; Mrs. H. T. Underwood of Salisbury, Miss Nell Toplin of Salisbury, and Mr. and Mrs. Robert Shuping, Mr. and Mrs. F. B. Sloop and Mr. and Mrs. G. R. Griffin of Salisbury.

Curry Krider of Salisbury described the explosion as “terrific enough to shake down a small house.”

“The Nightingale’s motors had been fouled and the fishing boat Cadet came alongside and started towing her,” he said. “The crew meanwhile worked on the two motors.

“Suddenly there was a terrible explosion from midship which blew off the ___ near the motors. A sheet of flame sprang up. The Cadet was cut loose and was trailing.

“Sea rafts were put out and many persons jumped into the sea and took refuge on them. There was much excitement. Those who lost their lives were the ones who stayed aboard until they were forced by the fire to jump.

“Then they had nothing to hold to and sank out of sight.”

The Cadet was piloted by Robert Mintz.

Describes Action

Conway, May 18- (UPS): One woman who survived this afternoon’s sinking of the Nightingale said the boat shook and bounced when the explosion roared through the craft.

“Several of us were down below deck and were already seasick,” she said. “We didn't have time to get lifebelts as some of the others did and thank God there were a couple of other boats nearby. They were waiting to pick us up when we got to the upper deck and jumped.”

New Motors Installed

Charles B. Frank, construction engineer of the U.S. Engineer’s office here, said that Douglas Sebastian, owner and pilot of the Nightingale, is an employee of the U. S. Engineers department, serving as mate aboard the dredge Howell, now at Wilmington, N.C.

“He was evidently on leave today,” Frank said. “He had operated excursion boats in that vicinity for several seasons, often employing someone else to pilot them.”

According to Frank, Sebastian purchased the Nightingale two years ago, and had new motors installed about two months ago.

Excursion Vessel Sinks In Harbor After Collision
3 Are Rescued; 1 Man Missing
By Billy E. Bowles, Staff Reporter

Collision with German freighter near the entrance to Charleston harbor sent the 104-foot charter boat Ocean Queen to the bottom last night, and one of her four crewmen is missing.

The 475-foot freighter Lutjenburg was unharmed.

A Coast Guard cutter picked up the other three crewmen – ship’s owner and master Sam Vereen, William A. Elliott and Lindsay [Lenzy] H. Carter [Jr.]. All are from Little River.

Identity of the missing crewman was not immediately known.

Three Coast Guard vessels from Charleston, a pilot boat and a helicopter from Savannah launched a search immediately. The Lutjenburg remained to assist in rescue efforts.

SUNK IN 3 MINUTES

The Ocean Queen was hit on the port side, aft, and went down in three minutes, witnesses said. She was on her way from Charleston to Miami, where she operates in winter. The excursion and fishing boat operates out of Ocean Drive in summer.

The German vessel was on her way from Georgetown.

The collision occurred about 8 p.m. near the sea buoy about 10 miles off Sullivan’s Island. The Ocean Queen sank in 34 feet of water.

PAPAW AT SCENE

The cutter Papaw headed for the scene within minutes after a pilot boat, Charleston Pilot II, reported the collision to the Coast Guard, about 8:10 p.m. The Coast Guard vessels and helicopter left immediately for the scene.

The Ocean Queen carries up to 60 passengers on pleasure cruises and fishing trips to the Gulf Stream but none was aboard last night.

A relative of owner Vereen, Rayford Vereen of Ocean Drive, told newsmen in a telephone interview that the charter boat always engages in commercial fishing in Florida in winter. But he said there were rumors the ship was to have been used this winter to ferry Cuban refugees to Key West, Fla. The rumor could not be substantiated immediately.

The Ocean Queen left several days ago from Little River and had been tied up here for at least one day.

With the Pawpaw at the scene were the 95-foot Capt Morgan, a 40-foot Coast Guard boat, Charleston Pilot II and the Lutjenburg. The German vessel was released, however, and headed for the State Ports Authority terminals in North Charleston.

A spokesman for the Charleston Pilots Assn. said he did not know whether a pilot was aboard the Lutjenburg when the collision occurred. Interviewed shortly before midnight, the spokesman said two pilots were on the Charleston Pilot II when she left Adgers Wharf to meet the Lutjenburg and another incoming vessel.

The two pilots were identified as Harold E. Igoe Jr. and Henry Lockwood.

A spokesman for the Charleston law firm of Moore, Mouzon and McGee, representing the German ship, said one of their representatives would meet the Lutjenburg upon her arrival here.

Strange Fish Brought In

A strange sort of fish was brought to Conway on last Saturday and displayed at the Peoples Drug Store.

It had the appearance of what some would describe as a baby mermaid. It had parts which resembled legs and arms and well-defined features with lips, nose and mouth.

By some negroes who saw it they described it as a “baboon-looking baby fish,” of which they claimed to have heard of before. With much rolling of the eyes and shrugs of the shoulders they expressed themselves in no uncertain terms about the evil which might follow the finding of such a curiosity as this was said to be.

The fish was caught, so it was stated by the Little River mail man, by Ardrey Crowel, of North Carolina. Crowell was over here with a fishing party and they went out to the rocks where they caught three hundred black fish, and this monstrosity.

In the opinion of a man in Conway who spent much of his time near the ocean, it was nothing but a stingerere [sic] cut and fashioned so as to resemble a human form. In his opinion the baby fish was a fake.

Whether a fake or not, the thing claimed a great deal of attention from people in Conway last Saturday.
